

IT ALL STARTS WITH CLEAN AC POWER

Power Quality Can Affect Picture & Sound Performance from Your Home Theater System.

WHAT YOU MAY NOT KNOW

AC power quality is steadily degrading. Power surges, voltage fluctuations and noise interference on the power line are now the norm instead of the exception. The result can be degraded audio and video quality. Home theater electronics may even be damaged or destroyed by voltage spikes and lightning.

Monster's PowerCenters™ featuring Clean Power™ filters protect your components from noise for a cleaner sound and fewer video artifacts. In addition, Monster's AVS 2000 Voltage Stabilizer™ delivers a steady 120 volts to your system for greater dynamics and more focused sound.

"If the AC power coming from your wall outlet doesn't start out right, everything else in the system is compromised."

– Noel Lee, The Head Monster

ELECTRONICS ARE NOT PROTECTED

AC outlets, phone lines, antenna/cable TV and satellite dishes are potential entry points for damaging power surges and spikes. Each of these should be connected to a Monster PowerCenter™ with Clean Power™ filters and Monster's AVS 2000 Voltage Stabilizer™ to ensure the highest performance and maximum system protection.

MONSTER RECOMMENDS:

Use Monster's PowerCenters™ with Clean Power™ to protect your system from harmful power line noise, surge and spikes, plus Monster's AVS 2000 to supply a steady 120 volts to your electronics for best maximum performance.

HIGHEST PERFORMANCE HOOK-UP:
