

STANDARD TV

Standard TV, While non-HDTV, is Still Capable of Reproducing High Quality Video, but Only with the Proper Connections.

WHAT YOU MAY NOT KNOW

High quality video from today's digital sources such as satellite receivers, cable TV, or DVD players can be reproduced on standard TV through component video or S-Video connections. If your standard TV is not equipped with component video connections, S-Video connections from your sources will provide the next best level of picture quality. Along with the video cables, you will also need high quality audio cables to the TV audio inputs.

By combining your regular TV with an A/V receiver, you can take advantage of Dolby Digital® and DTS® 5.1 or 7.1 surround available on today's sources through the use of digital coax or fiber optic connections.

CABLES NOT INCLUDED

Component Video • S-Video • Audio Cables

MONSTER RECOMMENDS:

Use Monster component video cables for the highest quality video signal. If these are not available, Monster S-Video cables provide the next best level of picture quality. Use Monster Interlink® for the audio connections. Use Monster LightSpeed® fiber optic or Monster DataLink™ digital coax cables for superior Dolby Digital® and DTS® surround sound with an A/V receiver.

Monster PowerCenters™ can provide surge protection with maximum sound and picture for all of the components connected to your TV.

HIGHEST PERFORMANCE HOOK-UP:
